

JavaScript Practice

An HTML, CSS, JS file is given that asks for two input numbers and show math operations in the document.

At this time, there is no conditions to check if you enter numbers as well as non zero number for the second input.

Complete the program so if you get nonnumeric input like alphabets or second number is zero then appropriate alerts generated.

You can use ***isNaN(var)*** method to check if a variable is nonnumeric.

Submit your solution in Blackboard.
