## Installing Git

1- We first need to get access to the git ecosystem and set it up

Go to https://git-scm.com/

Click on Downloads

Install for your OS.

If you are using Windows, you can run all the commands seen in this course in Git Bash which already comes with git (that you just installed), instead of using the Windows Command Prompt.

2- Open an account in Github.com
3- Open a new repository, and copy its address
4- Go to your folder, and open your terminal in your folder
5- Follow the following commands:

```
• git init
• git add *
• git commit -m "first commit"
• git branch -M main
• git remote add origin https://github.com/{github}/{reponame}.git
• git push -u origin main
```

6- check your files are uploaded in the repo
